課程概述:

人工智慧、基本程式設計 先備能力:

> deep neural networks (DNN). The course is suitable for a beginner in deep learning. Basics on logistic regression, neural networks, gradient descent, etc. will be covered. Hands-on practice on programming DNN will be a major aspect of learning in this course. Frameworks such as Tensorflow will also be covered. Important strategies and practices in machine learning projects will be introduced. Convolutional neural network (CNN) and sequence models along with applications will be the final part of the course.

This course is an introduction to deep learning, with special emphasis on

1. To understand the basics of deep learning

2. To implement deep neural networks

3. To structure machine learning projects

4. To use CNN and sequence models in applications
